

# GUIDE TO PYLON SIGNS

**Pylon Signs** are freestanding structures meant to be seen from a distance. These signs advertise a single business or several businesses. Pylon signs have several lightboxes built into a base made of metal, stone or brick with each tenant's logo installed onto each lightbox face.

# ILLUMINATED PYLON

There are two types of pylon signs to choose from: illuminated and non-illuminated. We are capable of designing both types of signs with or without an electronic display underneath. Including an electronic display will improve your signs visibility, especially at night. However, both kinds of pylon signs are guaranteed to be seen far and wide.
